

Municipal Climate Action Plan

Synthetic document for comparing PDF-to-Markdown and visual OCR tools

Executive summary

The City of Greenfield is preparing a climate action plan for the 2026-2030 period. The plan combines transport, buildings, and waste measures to reduce greenhouse gas emissions while protecting residents from heat and flooding.

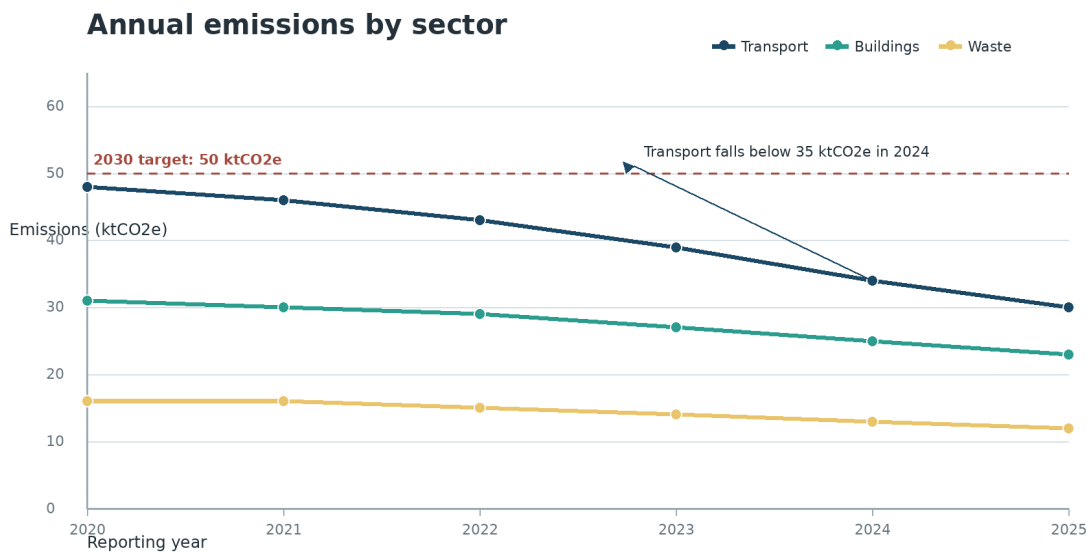

Between 2020 and 2025, estimated citywide emissions decreased from 95 to 65 ktCO₂e. The largest reduction came from public transport improvements and a cleaner electricity mix. The next phase focuses on reducing peak summer electricity demand, expanding tree canopy, and improving the reliability of household waste collection.

Indicator	2025 baseline	2030 direction
Total emissions	65 ktCO ₂ e	Reduce toward 50 ktCO ₂ e
Tree canopy coverage	22% of urban area	Increase to 30%
Households with weekly recycling	61%	Increase to 85%
Buildings with heat resilience upgrades	18%	Increase to 45%

Important: some benchmark facts are intentionally presented only in the chart on the next page. A complete extraction should preserve those visual facts in textual form.

Visual evidence: emissions trend

The figure below contains information that is not repeated in the surrounding paragraphs. It should be interpreted as part of the document, not treated as decoration.

Questions that a good extraction should answer

- Which sector had the highest emissions in 2020?
- In which year did transport emissions first fall below 35 ktCO₂e?
- What is the 2030 target shown by the dashed line?
- What was the combined 2025 emissions value across the three sectors?
- Which sector shows the smallest absolute reduction between 2020 and 2025?

Implementation measures and monitoring

The city will track progress through quarterly reporting. Departments should report both the activity completed and the measurable outcome. When results differ from the expected direction, the program manager should record the reason and the corrective action.

Priority measures

Measure	Owner	2026 milestone	Evidence
Bus corridor electrification	Mobility Office	12 additional electric buses	Fleet register and route data
Cool-roof upgrades	Buildings Unit	1,200 homes upgraded	Permit records and inspection sample
Food-waste collection	Public Works	Pilot in 4 districts	Collection logs and contamination rate
Urban tree planting	Parks Department	8,000 trees planted	GIS inventory and survival survey

Interpretation notes

The values in this document are synthetic and are intended only for tool comparison. A benchmark evaluator should check whether the extracted Markdown retains units, years, category names, numerical values, and the direction of change. It should also flag unsupported claims, missing values, and any mismatch between the chart and the extracted narrative.
